

1 Add Genesys Foundation to Visual Studio

Start Visual Studio **Tools** ► **Extensions and Updates**

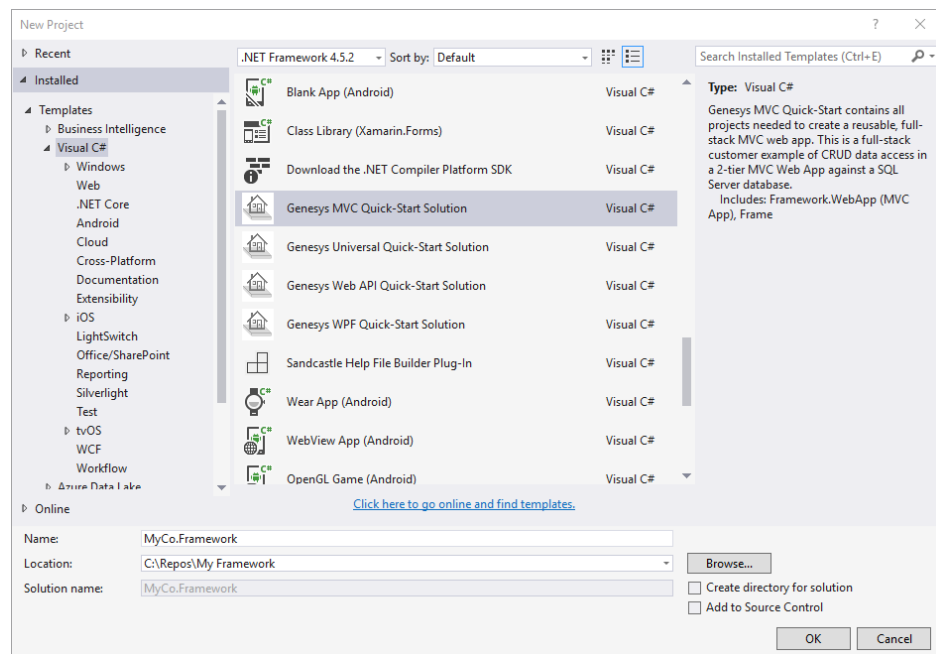

Search: **Genesys** **Download**

2 Create a new MVC, Web API, WPF or UWP Project

File ► **New** ► **Project**

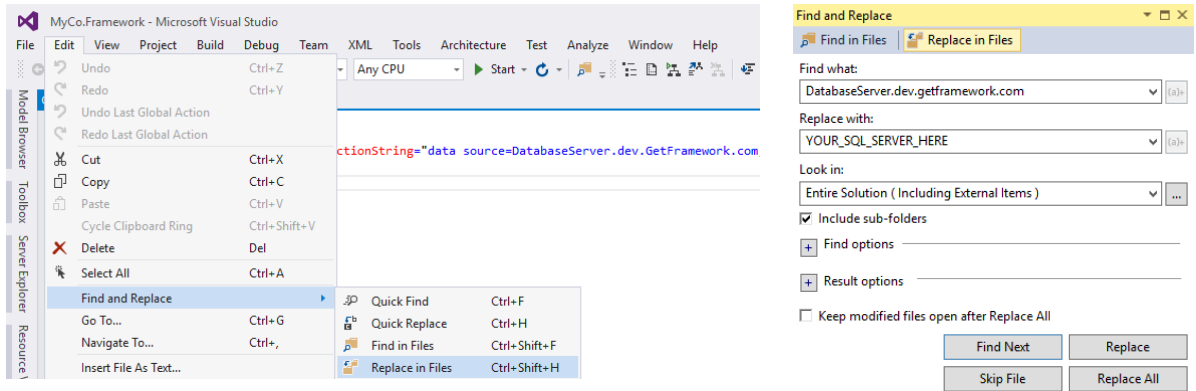

3 Change SQL Server Connection Strings

Visual Studio ► Edit ► Find and Replace ► Replace in Files

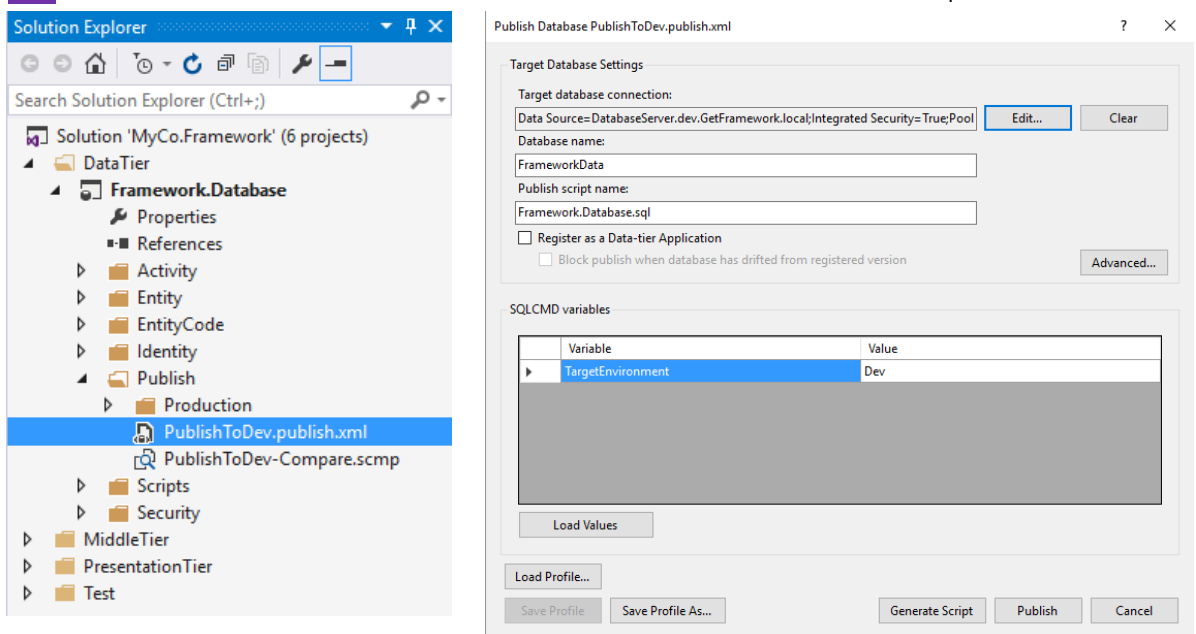

Find what: `DatabaseServer.dev.GenesysFramework.com`

Replace with: `Your_DatabaseServer_FQDN`

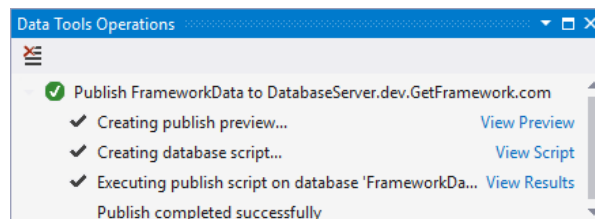

4 Publish the Database to your SQL Server

Foundation.Database ► Publish ► PublishToDev.publish.xml

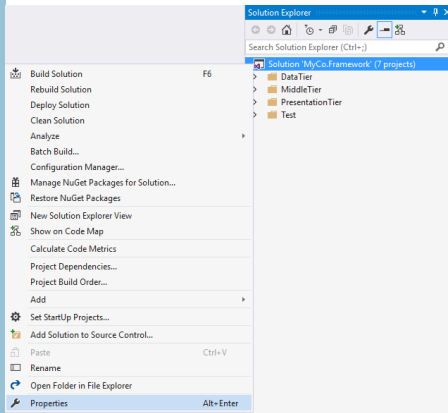

↓ Publish

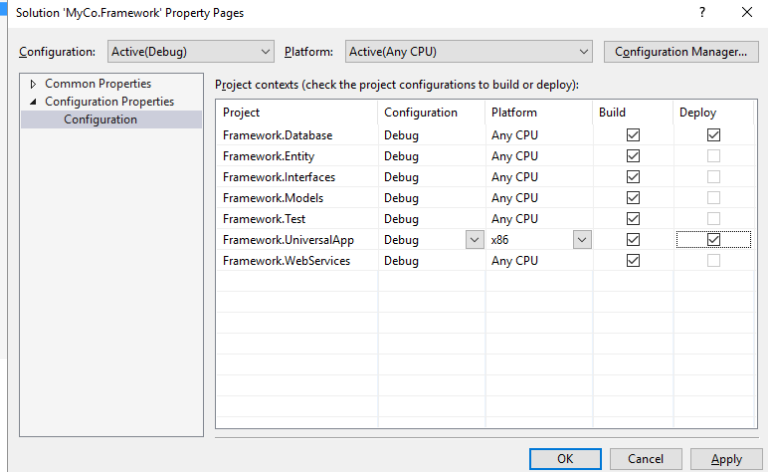

5 Double-Check your Debug and Build Settings

Right-click Solution ► Properties

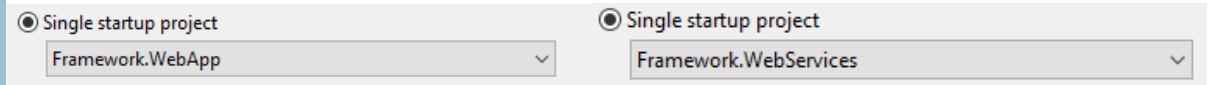

► Configuration ► Build/Deploy ► True

► Startup Project ► MVC + WebAPI + UWP + WPF ► Start

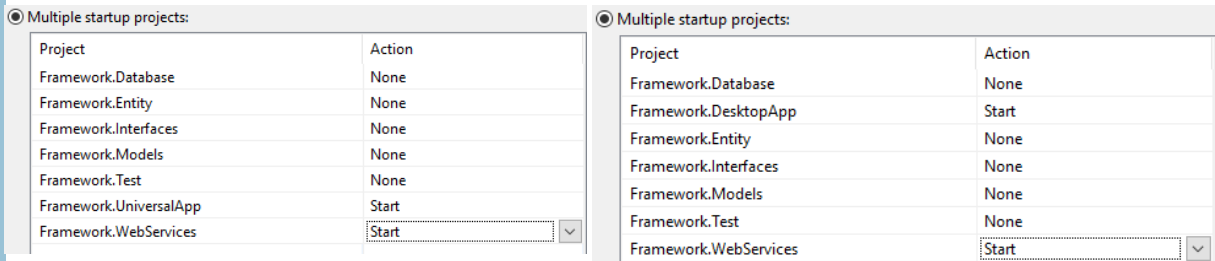

MVC

WEB API

UNIVERSAL

WPF

6 Run!
